

Armored RNA Quant® & Armored DNA Quant™

Internal Process Controls

Unlock High-Confidence Results with Armored Quant Molecular Controls

Armored Molecular Control technology stabilizes and protects nucleic acids from nuclease degradation by packaging them in a protective protein coat. Armored Controls have been utilized in IVD-cleared assays for more than 20 years and continue to serve as an important tool in the rapidly evolving space of molecular diagnostics. For methods ranging from qPCR to NGS there is now a convenient and inexpensive way to monitor the performance of your assays with the Armored RNA Quant® and Armored DNA Quant™ Internal Process Controls.

- Used as an onboard process control to monitor extraction through detection.
- Non-specific 1,000 nucleotide RNA or 495 base pair DNA sequence.
- Encapsulated in a coat of protein dimer armor which renders them resistant to degradation.
- Used as a spike-in to sample (e.g., urine, blood, CSF, plasma/other liquid biopsy) to monitor the overall efficiency of your process.

Reduced Complexity

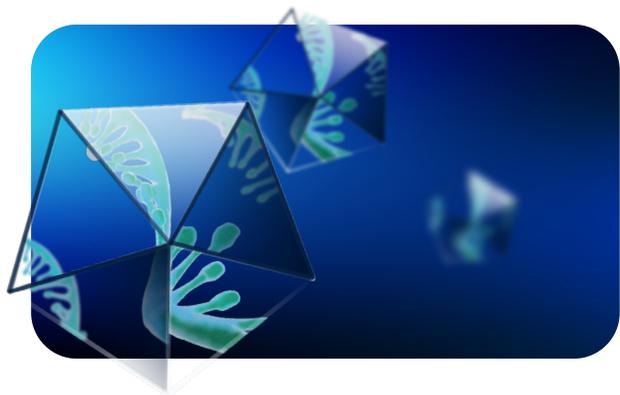

- Incorporates non-coding, non-specific non-homologous sequences.
- Simple, spike-in solutions to monitor extraction and process efficiency
- Compatible with new and existing RNA or DNA based clinical assays.
- Non-infectious, synthetic constructs simplify shipping and storage.

Optimized Workflow

- Deployable as extractable, exogenous internal positive control.
- Non-competitive sequence will not interfere with amplification/detection of target(s).
- Degradation-resistant in majority of biological matrices.
- Multiple volume and manufacturing options available.
- Available as cGMP or development lot in a range of fill volumes.

Armored Quant Internal Process Control Product Details

- NIST traceability enables usage in standardization and reproducibility assessments.
- Concentration: Available up to 1×10^{11} cp/mL
- Buffer Composition: TSM III (10 mM Tris, 100 mM NaCl, 1 mM $MgCl_2$, 0.1% Gelatin, 0.3% Microcide III, pH 7.0)
- Storage at -15 to -30°C
