708-0030**Lightning-Link (R) Streptavidin Antibody Labeling Kit**

Product Information	
Unit Size	3 x 10ug Reaction
Concentration	Concentration is not relevant for this product. Please see the protocols for proper use of this product.
Storage	Store at -20C.
Conjugate	Streptavidin
Product Description	
Description	<p>Lightning-Link antibody labeling kits enable the direct labeling of antibodies, proteins, peptides or other biomolecules for use in R&D applications, drug discovery and the development of diagnostic kits (See protocol for further information).</p> <p>Our streptavidin antibody labeling kit enables the direct conjugation of streptavidin to any biomolecule with an available amine group. The researcher simply pipettes their antibody or other biomolecule into the vial of Lightning-Link Streptavidin and incubates for 3 hours.</p> <p>Features Benefits Quick and easy to use Save time, no special knowledge required No separation steps 100% recovery - no antibody/protein loss Can be used in a wide range of applications Flexible Freeze dried Ships at ambient temperature, long shelf-life Fully scalable (10 ug to 1 g or more) Easy transfer from R&D to manufacturing Stringently QC tested Consistent high quality, excellent batch-to-batch reproducibility Large number of labels available Experimental flexibility Reliable: nearly 300 references Successfully used in many fields of research</p> <p>Streptavidin is a 53kDa protein purified from <i>Streptomyces avidinii</i>, which has widespread applications due to its very high affinity to the vitamin biotin. Streptavidin is a tetrameric molecule, composed of 4 13kDa monomers, each of which can bind a molecule of biotin.</p> <p>The Lightning-Link Streptavidin kit is unique in the sense that it is the only DIY streptavidin labeling kit available on the market. Like our biotinylation kits, Lightning-Link Streptavidin has been optimised to create high quality conjugates and minimise assay background. There is also no need for a wash or desalting step. The way in which the kits are optimised means the antibody or protein of interest will be labeled with up to 3 streptavidin molecules each, maximising the opportunity for biotin to bind and create a biotin streptavidin complex.</p> <p>Learn more about Lightning-Link™ Conjugation Kits by reading FAQs</p> <p>For more information please check out these useful links! Antibody Labeling Guide Antibody Conjugation Illustrated Assay</p>
Kit Components	1 or 3 glass vial(s) of Lightning-Link mix, 1 vial of LL-Modifier reagent, 1 vial of LL-Quencher reagent

Notes	<p>This product is manufactured by Abcam and distributed by Novus Biologicals.</p> <p>This product is for research use only and is not approved for use in humans or in clinical diagnosis. This product is guaranteed for 1 year from date of receipt and this statement overrides any mentioned guarantee period on the limitations section of this products datasheet. Please contact technical@novusbio.com with questions.</p>
--------------	---

Product Application Details

Application Notes	<p>By circumventing the desalting or dialysis steps that commonly interrupt traditional antibody conjugation procedures, LightningLink technology can be used to label both small (e.g. 10 ug) and large quantities of primary antibodies with ease. Batch-to-batch variation upon scale up is minimal as the process is so simple, and recoveries are always 100%. This kit is supplied with 3 vials, each suitable for labeling up to 10 ug of antibody.</p>
