NB100-56106

BID Antibody

Product Information	
Unit Size	0.05 ml
Concentration	This product is unpurified. The exact concentration of antibody is not quantifiable.
Storage	Store at 4C short term. Aliquot and store at -20C long term. Avoid freeze-thaw cycles.
Clonality	Polyclonal
Preservative	0.05% Sodium Azide
Isotype	IgG
Purity	Unpurified
Buffer	Neat whole antisera
Product Description	
Host	Rabbit
Gene ID	637
Gene Symbol	BID
Species	Human, Mouse, Rat, Canine, Gerbil
Specificity/Sensitivity	Full-length Bid is known to undergo cleavage/truncation (reviewed in Yin, 2006). Bid was initially found to be cleaved and activated by caspase-8 following death receptor activation. The term "Bid" was first used to describe the caspase-8 cleaved/truncated C-terminal Bid. Bid can be also cleaved by other proteases such as Granzyme B, calpains and cathepsin. The C-terminal portion is considered to be the active Bid moiety. This active form can translocate from the cytosol to the mitochondria. Therefore, the appearance of Bid in the mitochondria is considered to be an indication of active Bid. However, it should also be noted that Bid has been shown to translocate to the mitochondria without cleavage in some model systems. The proteolytic cleavage of Bid usually occurs in the unstructured loop region between the alpha 2 and alpha 3 helices, which is between amino acids (aa) 41 and 79 of Bid. For example, the caspase-8/3 cleavage site is at 60 (human) and 59 (mouse). It should be noted that after cleavage, the smaller N-terminal portion of Bid is not necessarily separated from the larger C-terminal portion. The exact size of the C-terminal cleavage products depends on the Bid cleavage sites; generally 11-15 kDa C-truncated cleavage forms are generated. Shorter C-terminal Bid cleavage products may result from protease cleavage that involves both caspases and other proteases. Full length Bid is quite stable, but cleaved/truncated forms may have a short half-life (less than 1.5 h) and degrade rapidly. Therefore, a time course may be useful when detecting Bid cleavage fragments.
Immunogen	Full-length recombinant mouse Bid protein was used as immunogen.
Product Application Details	
Applications	Western Blot, Immunohistochemistry, Immunohistochemistry-Frozen, Immunohistochemistry-Paraffin, Immunoprecipitation
Recommended Dilutions	Western Blot 1:1000-1:2000, Immunohistochemistry, Immunoprecipitation 1:50-1:200, Immunohistochemistry-Paraffin 1:1000-1:5000, Immunohistochemistry-Frozen 1:1000 - 1:5000

Images

Western Blot: BID Antibody [NB100-56106] - Analysis of Bid in normal mouse tissues using this antibody. BID = recombinant Bid. Arrowheads indicate the positions of the full-length (uncleaved) ~22 kDa Bid and the ~15 kDa truncated form of Bid (tBid) typical of the caspase-cleavage. Additional bands representing partial Bid degradation products are indicated by asterisks (*).

Immunohistochemistry-Paraffin: BID Antibody [NB100-56106] - Two cores from a human ovarian carcinoma formalin-fixed, paraffin-embedded tissue microarray demonstrate the variable expression of Bid protein. The sections were stained with Bid antibody at 1:2000 with hematoxylin-eosin counterstain. Section A shows very weak staining while section B stains much more strongly.

Western Blot: BID Antibody [NB100-56106] - Analysis of BID in NRK whole cell lysate using anti-BID antibody. Image from verified customer review.

Immunohistochemistry-Paraffin: BID Antibody [NB100-56106] - Formalin-fixed, paraffin-embedded human ovarian carcinoma tissue array stained for Bid expression using this antibody at 1:2000. Hematoxylin-eosin counterstain. Variable Bid expression is seen between patient samples.
