

# Product Datasheet

## Avian Influenza A H6N1 Nucleoprotein Antibody - BSA Free NB100-56572

Unit Size: 0.1 mg

Store at 4C short term. Aliquot and store at -20C long term. Avoid freeze-thaw cycles.

**NB100-56572****Avian Influenza A H6N1 Nucleoprotein Antibody - BSA Free**

<b>Product Information</b>	
<b>Unit Size</b>	0.1 mg
<b>Concentration</b>	1.0 mg/ml
<b>Storage</b>	Store at 4C short term. Aliquot and store at -20C long term. Avoid freeze-thaw cycles.
<b>Clonality</b>	Polyclonal
<b>Preservative</b>	0.05% Sodium Azide
<b>Isotype</b>	IgG
<b>Purity</b>	Protein G purified
<b>Buffer</b>	PBS

<b>Product Description</b>	
<b>Description</b>	Novus Biologicals Rabbit Avian Influenza A H6N1 Nucleoprotein Antibody - BSA Free (NB100-56572) is a polyclonal antibody validated for use in IHC, ELISA and ICC/IF. Anti-Avian Influenza A H6N1 Nucleoprotein Antibody: Cited in 3 publications. All Novus Biologicals antibodies are covered by our 100% guarantee.
<b>Host</b>	Rabbit
<b>Species</b>	Virus
<b>Specificity/Sensitivity</b>	The amino acid sequence used as immunogen has 100% identity to the H5N1 virus in chicken, duck and swine.
<b>Immunogen</b>	A synthetic peptide corresponding to amino acids 428-441 (AFTGNTEGRTSDMR) of avian flu nucleoprotein were used as the immunogen, GenBank no ADC34563.1.

<b>Product Application Details</b>	
<b>Applications</b>	Immunohistochemistry-Paraffin, ELISA, Immunocytochemistry/Immunofluorescence, Immunohistochemistry
<b>Recommended Dilutions</b>	ELISA 0.1-1 ug/ml, Immunohistochemistry 1:10-1:500, Immunocytochemistry/Immunofluorescence 1:10, Immunohistochemistry-Paraffin 1:10-1:500. Use reported in scientific literature (Thompson et al (2006))
<b>Application Notes</b>	This failed by western blot on the recombinant fusion protein.

## Images

Immunocytochemistry/Immunofluorescence: Avian Influenza A H6N1 Nucleoprotein Antibody [NB100-56572] - Staining of influenza-infected MDCK cells at 1:10 dilution. Image Courtesy of Catherine Thompson, The University of Reading

Immunohistochemistry: Avian Influenza A H6N1 Nucleoprotein Antibody [NB100-56572] - VN1203 infected & replicated in Purkinje cells, deep cerebellar nuclei of the cerebellum. Representative sections of cerebellum of ferrets instilled with allantoic fluid (A,B,G,H), HK483 (C,D,I,J), VN1203 (E,F,K,L). Viral antigen detected with IMGENEX 5187-A for avian influenza A NP & visualized with DAB. Brown stain indicates presence of virus. Counterstained with Luxol fast blue. (B-F) higher magnification of boxes in A-E respectively. H) White arrow indicates molecular layer, black arrow indicates granule layer, black arrowhead indicates a Purkinje cell, white arrowhead indicates Purkinje cell axons. L) Arrow indicate infected granule cell and arrowhead indicates infected Purkinje cell. Scale bars represent: A,C,E,G,I, - 2 mm; B,D,F,H,J,L - 300 um. Image collected and cropped by CiteAb from the following publication ([//dx.plos.org/10.1371/journal.pone.0046605](https://dx.plos.org/10.1371/journal.pone.0046605)) licensed under a CC-BY license.

Immunohistochemistry: Avian Influenza A H6N1 Nucleoprotein Antibody [NB100-56572] - VN1203 induced significant pathology despite similar nasal turbinate titers in ferrets infected with either virus. Viral titers of homogenized nasal turbinates were graphed as mean +/- SEM for VN1203 or HK483 infected ferrets. D-I. Representative samples of nasal turbinate tissue of ferrets instilled with allantoic fluid (D,G), HK483 (E,H), or VN1203 (F,I). D-F were stained with H&E, G-I were stained with anti-avian influenza NP and counterstained with Luxol fast blue. F. # indicates inflammatory cells infiltrating the underlying stroma. H,I. Arrows point to H5N1 infected cells. Scale bars: D-F, 300 um; G-I, 100 um. Image collected and cropped by CiteAb from the following publication ([//dx.plos.org/10.1371/journal.pone.0046605](https://dx.plos.org/10.1371/journal.pone.0046605)) licensed under a CC-BY license.

Immunohistochemistry: Avian Influenza A H6N1 Nucleoprotein Antibody [NB100-56572] - VN1203 infection in the ferret brain was multifocal and evident in the olfactory tract. Representative sections from the frontal lobe of ferrets intranasally instilled with allantoic fluid (A,D), on: olfactory nucleus, rf: rhinal fissure, HK483 (B,E) or VN1203 (C,F) were stained for viral antigen with IMGENEX 5187-A for avian influenza A NP and visualized with DAB. Brown stain indicates the presence of virus. Counterstained with Luxol fast blue. Scale bars: A-C) 5 mm, D-F) 300 um. Image collected and cropped by CiteAb from the following publication ([//dx.plos.org/10.1371/journal.pone.0046605](https://dx.plos.org/10.1371/journal.pone.0046605)) licensed under a CC-BY license.
