Application Notes	This lysate is prepared as a positive control for separation by SDS-PAGE and subsequent Western blot analysis. Lysates are prepared in denaturing buffer WITHOUT reducing agents (i.e. 2-mercaptoethanol (BME) or dithiothreitol (DTT)). If reducing conditions are desired, add a reducing agent prior to heating. Heat lysate to 95C for 5 minutes and rapidly cool. NOTE: Boiling can cause aggregation in large proteins, resulting in the proteins inability to enter the gel. Large protein samples should be heated to 65C for 5-10 minutes prior to loading.
