### NBP2-33070APC

Thyroglobulin Antibody (2H11) [Allophycocyanin]

| Thyroglobulin Antibody (2H11) [Allophycocyanin] |   |
|---|---|
| Product Information                             |   |
| Unit Size                                       | 0.1 ml  |
| Concentration                                   | Please see the vial label for concentration. If unlisted please contact technical services.   |
| Storage   | Store at 4C in the dark.  |
| Clonality                                       | Monoclonal  |
| Clone   | 2H11  |
| Preservative                                    | 0.05% Sodium Azide  |
| Isotype   | IgG1 Kappa  |
| Conjugate                                       | Allophycocyanin   |
| Purity  | Protein A or G purified   |
| Buffer  | PBS   |
| Product Description                             |   |
| Description                                     | This conjugate is made on demand. Actual recovery may vary from the stated volume of this product. The volume will be greater than or equal to the unit size stated on the datasheet.   |
| Host  | Mouse   |
| Gene ID   | 7038  |
| Gene Symbol                                     | TG  |
| Species   | Human, Mouse, Rat   |
| Marker  | Thyroidal Cell Marker   |
| Specificity/Sensitivity                         | monoclonal antibody 2H11 reacts with a partially defined epitope of human thyroglobulin. This epitope is different form the epitope recognized by monoclonal antibody 6E1. Thyroglobulin is a 660kDa dimeric pre-protein with multiple glycosylation sites. It is produced by and processed within the thyroid gland to produce the hormone thyroxine and triiodothyronine. Prior to forming dimers, thyroglobulin monomers undergo conformational maturation in the endoplasmic reticulation. The vast majority of follicular carcinomas of the thyroid will give positive immunoreactivity for anti-thyroglobulin even though sometimes only focally. Poorly differentiated carcinomas of the thyroid are frequently anti-thyroglobulin negative. Adenocarcinomas of other-than-thyroid origin do not react with this antibody. This antibody is useful in identification of thyroid carcinoma of the papillary and follicular types. Presence of thyroglobulin, combined with anticalcitonin, can identify medullary carcinomas of the thyroid. Furthermore, antithyroglobulin, combined with anti-TTF1, can be a reliable marker to differentiate between primary thyroid and lung neoplasms. |
| Immunogen                                       | Human thyroid follicular cells  |
| Product Application Details                     |   |
| Applications                                    | Flow Cytometry, Immunohistochemistry, Immunohistochemistry-Paraffin, CyTOF-ready  |
| Recommended Dilutions                           | Flow Cytometry, Immunohistochemistry, Immunohistochemistry-Paraffin, CyTOF-ready  |
