NBP2-34512UV

ACTH Antibody (57) [DyLight 350] - N-terminal

Product Information Unit Size 0.1 ml Concentration Please see the vial label for concentration. If unlisted please contact to services. Storage Store at 4C in the dark. Clonality Monoclonal Clone 57 Preservative 0.05% Sodium Azide Isotype IgG1 Kappa Conjugate DyLight 350 Purity Protein A or G purified Buffer 50mM Sodium Borate Product Description This conjugate is made on demand. Actual recovery may vary from the volume of this product. The volume will be greater than or equal to the stated on the datasheet. Host Mouse	chnical

Gene ID 5443	
Gene Symbol POMC	
Species Human, Mouse, Rat	
Reactivity Notes Expected to show broad species reactivity.	
Marker Pituitary Marker	
ACTH (same as Corticotropin) is a 39 amino acid active peptide produ anterior pituitary. This monoclonal antibody is specific to Synacthen (a ACTH); does not react with CLIP (aa17-39 of ACTH). POMC (proopiomelanocortin or corticotropin-lipotropin) is a 267 amino acid polype hormone precursor that goes through extensive, tissue-specific posttra processing by convertases. POMC is cleaved into ten hormone chains NPP, ACTH, alpha-MSH (Melanocyte Stimulating Hormone), beta-MSH MSH, CLIP (corticotropin-like intermediary peptide), Lipotropin-beta, Lipamma, beta-endorphin and Met-enkephalin. ACTH is also produced immune system (T-cells, B-cells, and macrophages) in response to still associated with stress. Anti-ACTH is a useful marker in classification of tumors and the study of pituitary disease. It reacts with ACTH-producin (corticotrophs). It also may react with other tumors (e.g. some small cell carcinomas of the lung) causing paraneoplastic syndromes by secreting	eptide inslational named H, gamma- potropin- by cells of muli f pituitary ng cells
Immunogen Recombinant fragment corresponding to human ACTH (N-terminal) co to keyhole limpet hemocyanin. (Uniprot: P01189)	njugated
