Golgi Complex Antibody (371-4) [mFluor Violet 450 SE]

| 0.1 ml |
|--|
| Please see the vial label for concentration. If unlisted please contact technical services. |
| Store at 4C in the dark. |
| Monoclonal |
| 371-4 |
| 0.05% Sodium Azide |
| IgG1 Kappa |
| mFluor Violet 450 SE |
| Protein A or G purified |
| 50mM Sodium Borate |
| |
| Mouse |
| Human, Mouse (Negative), Rat (Negative) |
| Does not react with Mouse or Rat. |
| Marker for Human Cells |
| This monoclonal antibody recognizes an antigen associated with the Golgi complex in human cells only. It can be used to stain the Golgi complex in cell or tissue preparations and can be used as a Golgi marker in subcellular fractions. It produces a diffuse staining pattern of the Golgi zone in normal and malignant cells. This monoclonal antibody is an excellent marker for human cells in xenographic model research. It reacts specifically with human cells. The Golgi apparatus is an organelle present in all eukaryotic cells that forms a part of the endomembrane system. The primary function of the Golgi apparatus is to process and package macromolecules synthesized by the cell for exocytosis or use within the cell. The Golgi is made up of a stack of flattened, membrane-bound sacs known as cisternae, with three functional regions: the cis face, medial region and trans face. Each region consists of various enzymes that selectively modify the macromolecules passing though them, depending on where they are destined to reside. Several spherical vesicles that have budded off of the Golgi are present surrounding the main cisternae. |
