ndothelial Marker
on Willebrand Factor (vWF) is a multimeric glycoprotein that is found in indothelial cells, plasma and platelets. It acts as a carrier protein for Factor VIII and promotes platelet adhesion and aggregation. vWF undergoes a variety of osttranslational modifications that influence the affinity and availability for Factor III, including cleavage of the propeptide and formation of N-terminal disulfide onds. This antibody helps to establish the endothelial nature of some lesions of isputed histogenesis, e.g. Kaposi s sarcoma and cardiac myxoma. It is widely sed for differentiating vascular lesions from those of other tissue differentiation within a panel of other vascular markers although not all tumors of endothelial differentiation contain this antigen.
ecombinant human Von Willebrand Factor fragment spanning around aa 845-49 (exact sequence is proprietary) (Uniprot: P04275)
yLight (R) is a trademark of Thermo Fisher Scientific Inc. and its subsidiaries.
