# NBP2-34550DL594

ACTH Antibody (AH26 + 57) [DyLight 594] - N-terminal

light 594] - N-terminal
0.1 ml
Please see the vial label for concentration. If unlisted please contact technical services.
Store at 4C in the dark.
Monoclonal
AH26 + 57
0.05% Sodium Azide
IgG1 Kappa/IgG1 Kappa
DyLight 594
Protein A or G purified
50mM Sodium Borate
Mouse
5443
POMC
Human, Mouse, Rat
Expected to show broad species reactivity.
Pituitary Marker
ACTH (same as Corticotropin) is a 39 amino acid active peptide produced by the anterior pituitary. This monoclonal antibody is specific to Synacthen (aa1-24 of ACTH); does not react with CLIP (aa17-39 of ACTH). POMC (proopiomelanocortin or corticotropin-lipotropin) is a 267 amino acid polypeptide hormone precursor that goes through extensive, tissue-specific posttranslational processing by convertases. POMC is cleaved into ten hormone chains named NPP, ACTH, alpha-MSH (Melanocyte Stimulating Hormone), beta-MSH, gamma-MSH, CLIP (corticotropin-like intermediary peptide), Lipotropin-beta, Lipotropin-gamma, beta-endorphin and Met-enkephalin. ACTH is also produced by cells of immune system (T-cells, B-cells, and macrophages) in response to stimuli associated with stress. Anti-ACTH is a useful marker in classification of pituitary tumors and the study of pituitary disease. It reacts with ACTH-producing cells (corticotrophs). It also may react with other tumors (e.g. some small cell carcinomas of the lung) causing paraneoplastic syndromes by secreting ACTH.
Synthetic peptide aa1-24 of human ACTH (AH26); N-terminal fragment of human ACTH conjugated to KLH (57) (Uniprot: P01189)
DyLight (R) is a trademark of Thermo Fisher Scientific Inc. and its subsidiaries.
Western Blot, Immunohistochemistry, Immunohistochemistry-Paraffin
Western Blot, Immunohistochemistry, Immunohistochemistry-Paraffin
Use in Western Blot reported in scientific literature (PMID: 32691278). Optimal dilution of this antibody should be experimentally determined.
