<b>Specificity/Sensitivity</b>	Recognizes a 60kDa protein, identified as the heat shock protein 60 (HSP60). A wide variety of environmental and pathophysiological stressful conditions trigger the synthesis of a family of proteins known as heat shock proteins (hsps). Hsp60 is a potential antigen in a number of autoimmune diseases. In human arthritis and in experimentally induced arthritis in animals, disease development coincides with the development of immune reactivity directed against not only bacterial HSP60, but also against its mammalian homolog. Clone GROEL730 reacts only with human and is useful in distinguishing human HSP60 from other mammalian and bacterial HSP60.
<b>Immunogen</b>	Recombinant human HSP60 protein (Uniprot: P10809)
