Western Blot: EGFR Antibody (H9B4) - Azide and BSA Free [NBP2-34628] - Western Blot Analysis of A431 cell lysate using EGFR Antibody (H9B4).

Simple Western: EGFR Antibody (H9B4) - Azide and BSA Free [NBP2-34628] - Electropherogram image of the corresponding Simple Western lane. EGF R/ErbB1 antibody was used at 10 ug/ml dilution of A431 and HeLa lysates(s) respectively.

Simple Western: EGFR Antibody (H9B4) - Azide and BSA Free [NBP2-34628] - Simple Western lane view shows a specific band for EGF R/ErbB1 in 0.2 mg/ml of A431 lysate(s). This experiment was performed under reducing conditions using the 12-230 kDa separation system.

Protein Array: EGFR Antibody (H9B4) - Azide and BSA Free [NBP2-34628] - Analysis of Protein Array containing more than 19,000 full-length human proteins using EGFR Antibody (H9B4) Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (Monoclonal Antibody) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProt(TM) array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProt(TM) are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a Monoclonal Antibody to its intended target. A Monoclonal Antibody is considered to be specific to its intended target, if the Monoclonal Antibody has an S-score of at least 2.5.

Simple Western: EGFR Antibody (H9B4) - Azide and BSA Free [NBP2-34628] - Simple Western lane view shows a specific band for EGF R/ErbB1 in 0.2 mg/ml of HeLa lysate(s). This experiment was performed under reducing conditions using the 12-230 kDa separation system.
