| Species                     | Virus                                                                                                                                                                                                                                     |
| Reactivity Notes            | 0                                                                                                                                                                                                                                         |
| Specificity/Sensitivity     | This RVF virus antibody was derived from a peptide sequence near the carboxy terminus of the polyprotein precursor translated from the M segment. It will therefore detect both the precursor and the Glycoprotein G2.                    |
| Immunogen                   | Antibody was raised against a 19 amino acid synthetic peptide near the carboxy terminus of the RVF virus. The immunogen is located within amino acids 960 - 1010 of Rift Valley Fever Virus. Amino Acid Sequence:<br>FERGSLPQTRNDKTF AASK |
