| Recognizes a protein of 21kDa, identified as the Bax protein. This more antibody is highly specific to Bax and shows no cross-reaction with Bcl protein. Bcl-2 blocks cell death following a variety of stimuli. Bax has e amino acid homology with Bcl-2 and it homodimerizes and forms heter with Bcl-2. Overexpression of Bax accelerates apoptotic death induced cytokine deprivation in an IL-3 dependent cell line, and Bax also counted death repressor activity of Bcl-2. | I-2 or BcI-X xtensive rodimers d by |
