Human Prostate Tissue Lysate (Tumor)

<b>Product Information</b>	
<b>Unit Size</b>	0.1 mg
<b>Concentration</b>	Please contact technical services for concentration.
<b>Storage</b>	Store at -80C. Avoid freeze-thaw cycles.
<b>Product Description</b>	
<b>Description</b>	<p><b>Matched Tumor &amp; Normal Tissue Lysate Set</b></p> <p>Diagnosis: Prostatic Hypertrophy</p> <p>Sex: Male</p> <p>Age: 79</p> <p>Grade: N/A</p> <p>Stage: N/A</p> <p>Tumor Pathology Data</p> <p>Location: Prostate</p> <p>Gross findings: Tumor size 3 x 2.5 x 3 cm. Smooth, demarcated. Cut section soft and ivory-white.</p> <p><b>Microscopic findings</b></p> <p>The specimen is composed of many benign fibrous cells. Hyperplastic fibrous tissues are present.</p> <p><b>Preparation Method</b></p> <p>Tissue specimens are homogenized in modified RIPA buffer to obtain the soluble proteins, and centrifuged to clarify.  Extraction 1: PBS, pH 7.4; 1 ug/ml Aprotinin; 1 mM NaF  Modified RIPA Buffer: 1 mM EDTA; 1 ug/ml Pepstatin-A; 0.1% SDS; 0.25% Na deoxycholate; 1 ug/ml Leupeptin; 1 mM PMSF; 1 mM Na<sub>3</sub>VO<sub>4</sub></p>
<b>Species</b>	Human
<b>Notes</b>	<p>The vial is provided with a 10% overfill. Maximum recovery can be obtained by centrifuging the vial briefly to collect any solution on the cap and tube sides.</p> <p>This material has tested negative for HbsAg, HIV 1/2, and HCV. Use UNIVERSAL PRECAUTIONS when handling. Human tissue derivatives must be treated as a potentially infectious agent and disposed of appropriately</p>
<b>Lysate Type</b>	Tissue
<b>Lysate Tissue</b>	Prostate
<b>Lysate Tissue Condition</b>	Tumor
<b>Product Application Details</b>	

**Application Notes**

These lysates have not been subjected to denaturing or reducing conditions. This allows the tissue or cell lysate to be used in a variety of applications; to study protein-protein interaction, ligand binding, ELISA, immunoprecipitation, 1D and 2D gel electrophoresis, and Western blotting for the detection of specific protein targets.

For use in 1D and 2D gel electrophoresis, the addition of a denaturing gel loading buffer with reducing agents may be required.

Buffer requirements for performing protein-protein interaction and ligand binding studies can vary significantly from RIPA buffer and may require modifications. In most cases, tissue lysates in RIPA buffer can be used, directly in standard ELISA and immunoprecipitation assays.

These lysates are proteomic discovery tools. Researchers should validate and optimize for individual use.
