Human Prostate Tissue Lysate (Adult Tumor)

· · ·	,
Product Information	
Unit Size	0.1 mg
Concentration	Please contact technical services for concentration.
Storage	Store at -80C. Avoid freeze-thaw cycles.
Product Description	
Description	
	Tumor Tissue Lysate
	Diagnosis: Prostatic Fibroadenoma
	Sex: Male
	Age: 40
	Grade: N/A
	Stage: N/A
	Tumor Pathology Data
	Location: Prostate
	Gross findings: No data available
	Microscopic Findings
	No data available
	Preparation Method
	Tissue specimens are homogenized in modified RIPA buffer to obtain the soluble proteins, and centrifuged to clarify. Extraction 1: PBS, pH 7.4; 1 ug/ml Aprotinin; 1 mM NaF Modified RIPA Buffer: 1 mM EDTA; 1 ug/ml Pepstatin-A; 0.1% SDS; 0.25% Na deoxycholate; 1 ug/ml Leupeptin; 1 mM PMSF; 1 mM Na3VO4
Species	Human
Notes	The vial is provided with a 10% overfill. Maximum recovery can be obtained by centrifuging the vial briefly to collect any solution on the cap and tube sides. This material has tested negative for HbsAg, HIV 1/2, and HCV. Use
	UNIVERSAL PRECAUTIONS when handling. Human tissue derivatives must be treated as a potentially infectious agent and disposed of appropriately
Lysate Type	Tissue
Lysate Tissue	Prostate
Lysate Tissue Condition	Tumor
Lysate Life Stage	Adult
Product Application Details	

Product Application Details

Application Notes	 These lysates have not been subjected to denaturing or reducing conditions. This allows the tissue or cell lysate to be used in a variety of applications; to study protein-protein interaction, ligand binding, ELISA, immunoprecipitation, 1D and 2D gel electrophoresis, and Western blotting for the detection of specific protein targets. For use in 1D and 2D gel electrophoresis, the addition of a denaturing gel loading buffer with reducing agents may be required. Buffer requirements for performing protein-protein interaction and ligand binding studies can vary significantly from RIPA buffer and may require modifications. In most cases, tissue lysates in RIPA buffer can be used, directly in standard ELISA and immunoprecipitation assays. These lysates are proteomic discovery tools. Researchers should validate and optimize for individual use.
