Stomach Matched Tumor and Normal Tissue Lysate

| Product Information | |
|---------------------|---|
| Unit Size | 2 Vials |
| Concentration | mg/ml |
| Storage | Store at -80C. Avoid freeze-thaw cycles. |
| Product Description | |
| Description | <p>1 x Human stomach tumor tissue lysate (1 mg/ml, 100 ug/vial) 1 x Human stomach normal tissue lysate (matched) (1 mg/ml, 100 ug/vial)</p> <p>Matched Tumor & Normal Tissue Lysate Set</p> <p>Diagnosis: Adenocarcinoma</p> <p>Sex: Male</p> <p>Age: 48</p> <p>Grade: N/A</p> <p>Stage: IIIA, T3N1M0</p> <p>Tumor Pathology Data</p> <p>Location: Gastric antrum</p> <p>Gross findings: Tumor located at the pyloric antrum. Tumor measures 5 cm x 5 cm x 4 cm in diameter. Lesion is large, has an irregular profile, shows necrosis and interrupts the gastric folds. Paragastric lymph nodes: 6.</p> <p>Microscopic Findings</p> <p>The tumor is composed of nests of epithelial cells forming the gland, with coarse chromatin, and nuclear pleomorphism. The tumor cells also are arranged in trabecular patterns or cords, and invade the muscular wall and serosa. Tumor necrosis is present, as well as lymphocytic response. Lymph nodes show 3 of 6 positive.</p> <p>Preparation Method</p> <p>Tissue specimens are homogenized in modified RIPA buffer to obtain the soluble proteins, and centrifuged to clarify. Extraction 1: PBS, pH 7.4; 1 ug/ml Aprotinin; 1 mM NaF Modified RIPA Buffer: 1 mM EDTA; 1 ug/ml Pepstatin-A; 0.1% SDS; 0.25% Na deoxycholate; 1 ug/ml Leupeptin; 1 mM PMSF; 1 mM Na3VO4</p> |
| Species | Human |
| Notes | <p>The vial is provided with a 10% overfill. Maximum recovery can be obtained by centrifuging the vial briefly to collect any solution on the cap and tube sides.</p> <p>This material has tested negative for HbsAg, HIV 1/2, and HCV. Use UNIVERSAL PRECAUTIONS when handling. Human tissue derivatives must be treated as a potentially infectious agent and disposed of appropriately</p> |

| Lysate Type | Matched Tumor and Normal Tissue |
| Lysate Tissue | Stomach |
| Lysate Life Stage | Adult |

Product Application Details

| | |
|--------------------------|---|
| Application Notes | <p>These lysates have not been subjected to denaturing or reducing conditions. This allows the tissue or cell lysate to be used in a variety of applications; to study protein-protein interaction, ligand binding, ELISA, immunoprecipitation, 1D and 2D gel electrophoresis, and Western blotting for the detection of specific protein targets.</p> <p>For use in 1D and 2D gel electrophoresis, the addition of a denaturing gel loading buffer with reducing agents may be required.</p> <p>Buffer requirements for performing protein-protein interaction and ligand binding studies can vary significantly from RIPA buffer and may require modifications. In most cases, tissue lysates in RIPA buffer can be used, directly in standard ELISA and immunoprecipitation assays.</p> <p>These lysates are proteomic discovery tools. Researchers should validate and optimize for individual use.</p> |
