## NBP2-47114

Breast Matched Tumor and Normal Tissue Lysate

Breast Matched Tumor and Normal Tissue Lysate	
Product Information	
Unit Size	2 Vials
Concentration	mg/ml
Storage	Store at -80C. Avoid freeze-thaw cycles.
Product Description	
Description	1 x Human breast tumor tissue lysate (1 mg/ml, 100 ug/vial) 1 x Human breast normal tissue lysate (matched) (1 mg/ml, 100 ug/vial)
	Matched Tumor & Normal Tissue Lysate Set
	Diagnosis: Mucinous carcinoma
	Sex: Female
	Age: 51
	Grade: 1
	Stage: II, T2N1Mx
	Tumor Pathology Data
	Location: Not recorded
	Gross findings: Not recorded.
	Preparation Method
	Tissue specimens are homogenized in modified RIPA buffer to obtain the soluble proteins, and centrifuged to clarify.  Extraction 1: PBS, pH 7.4; 1 ug/ml Aprotinin; 1 mM NaF  Modified RIPA Buffer: 1 mM EDTA; 1 ug/ml Pepstatin-A; 0.1% SDS; 0.25% Na deoxycholate; 1 ug/ml Leupeptin; 1 mM PMSF; 1 mM Na3VO4
Species	Human
Notes	The vial is provided with a 10% overfill. Maximum recovery can be obtained by centrifuging the vial briefly to collect any solution on the cap and tube sides.
	This material has tested negative for HbsAg, HIV 1/2, and HCV. Use UNIVERSAL PRECAUTIONS when handling. Human tissue derivatives must be treated as a potentially infectious agent and disposed of appropriately
Lysate Type	Matched Tumor and Normal Tissue
Lysate Tissue	Breast
Lysate Life Stage	Adult

# **Product Application Details**

#### **Application Notes**

These lysates have not been subjected to denaturing or reducing conditions. This allows the tissue or cell lysate to be used in a variety of applications; to study protein-protein interaction, ligand binding, ELISA, immunoprecipitation, 1D and 2D gel electrophoresis, and Western blotting for the detection of specific protein targets.

For use in 1D and 2D gel electrophoresis, the addition of a denaturing gel loading buffer with reducing agents may be required.

Buffer requirements for performing protein-protein interaction and ligand binding studies can vary significantly from RIPA buffer and may require modifications. In most cases, tissue lysates in RIPA buffer can be used, directly in standard ELISA and immunoprecipitation assays.

These lysates are proteomic discovery tools. Researchers should validate and optimize for individual use.
