Calponin 1 Antibody (CNN1/832 + CALP) [Alexa Fluor® 594]

| Product InformationUnit Size0.1 mlConcentrationPlease see the vial label for concentration. If unlisted please contact technical services.StorageStore at 4C in the dark.ClonalityMonoclonalCloneCNN1/832 + CALPPreservative0.05% Sodium AzideIsotypeIgG1 KappaConjugateAlexa Fluor 594PurityProtein A or G purifiedBuffer50mM Sodium BorateProduct Description1264Gene ID1264Gene SymbolCNN1SpeciesHuman, RatMarkerSmooth Muscle MarkerSpecificity/SensitivityMultiple isoelectric variants of calponin have been identified, however only two molecular weight isoforms exist; a 34kDa form and a 29kDa form. Expression of the 29kDa form. I-calponin, is or miranty versited to muscle of the urogenital tract, whereas the higher molecular weight variant has been demonstrated in vascular and visceral smooth muscle. In Western blothing, his monoclonal antibody reacts with only the 34kDa form of calponin functional tast of cultivated hommasole and is unreactive with fibrolast extracts of cultivated human forteskin. Calponin is a calmodulin, F-actin and tropomyosin binding protein, which is thought to be involved in the regulation of smooth muscle contraction. Calponin expression of the defineentiated (contractile) phenotype of developing smooth muscle (CALP) (Uniprot: P51911) | | | | |
