Gene ID 7535	
Gene Symbol ZAP70	
Species Human	
Marker Chronic Lymphocytic Leukemia Marker	
ZAP70 is a 70kDa protein tyrosine kinase found in T-cells and natural kincontrol of this protein translation is via the IgVH gene. In Western blotting whole cell lysates of normal peripheral blood mononuclear cells, the antilabels a band corresponding to ZAP70. In Western blotting of whole cell of CD19-positive Purified leukemia cells from patients with Ig-unmutated mutated CLL, the antibody labels a band corresponding to ZAP70 in the unmutated CLL samples, whereas no band is observed in the Ig-mutate samples. In Western blotting of cell lysates of Jurkat cells (T-lymphoblas line), the antibody labels a band of 70kDa protein. In Western blotting of lysates of A431 cells (carcinoma cell line), no band is observed. ZAP70 expressed in leukemic cells of approximately 25% of chronic lymphocytic leukemia (CLL) cases as well. Anti-ZAP70 expression is an excellent sumarker for the distinction between the Ig-mutated (anti-ZAP70 negative) unmutated (anti-ZAP70 positive) CLL subtypes and can identify patient with divergent clinical courses. The anti-ZAP70 positive Ig-unmutated Chave been shown to have a poorer prognosis.	ng of ibody lysates d and Ig- Ig- d CLL stic cell cell protein is c rrogate and Ig- groups
