<b>Host</b>	Mouse
<b>Gene ID</b>	6693
<b>Gene Symbol</b>	SPN
<b>Species</b>	Human
<b>Marker</b>	T-Cell Marker
<b>Specificity/Sensitivity</b>	It recognizes a cell surface glycoprotein of 95/115/135kDa (depending upon the extent of glycosylation), identified as CD43. 70-90% of T-cell lymphomas and from 22-37% of B-cell lymphomas express CD43. No reactivity has been observed with reactive B-cells. So a B-lineage population that co-expresses CD43 is highly likely to be a malignant lymphoma, especially a low-grade lymphoma, rather than a reactive B-cell population. When CD43 antibody is used in combination with anti-CD20, effective immunophenotyping of the lymphomas in formalin-fixed tissues can be obtained. Co-staining of a lymphoid infiltrate with anti-CD20 and anti-CD43 argues against a reactive process and favors a diagnosis of lymphoma.
<b>Immunogen</b>	Recombinant full-length human CD43/Sialophorin protein (Uniprot: P16150)
