Immunohistochemistry-Paraffin: Adiponectin/Acrp30 Antibody (ADPN/1370) - Azide and BSA Free [NBP2-54319] - Formalin-fixed, paraffin-embedded human Kidney stained with Adiponectin Monoclonal Antibody (ADPN/1370).

Protein Array: Adiponectin/Acrp30 Antibody (ADPN/1370) - Azide and BSA Free [NBP2-54319] - Analysis of Protein Array containing more than 19,000 full-length human proteins using Adiponectin/Acrp30 Antibody (ADPN/1370). Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProt(TM) array. Z-scores are described in units of standard deviations (SDs) above the mean value of all signals generated on that array. If targets on HuProt(TM) are arranged in descending order of the Z-score, the S-score is the difference (also in units of SDs) between the Z-score. S-score therefore represents the relative target specificity of a MAb to its intended target. A MAb is considered to be specific to its intended target, if the MAb has an S-score of at least 2.5.
