Immunohistochemistry (Formalin-fixed): 0.25-0.5ug/ml for 30 minutes at RT. Staining of formalin-fixed tissues is enhanced by heating tissue sections in 10mM Tris with 1mM EDTA, pH 9.0 for 45 min at 95C followed by cooling at RT for 20 minutes.	Species	Human

Immunohistochemistry-Paraffin: IL-3R alpha/CD123 Antibody (IL3RA/2947R) [NBP2-79717] - Formalin-fixed, paraffin-embedded human Tonsil stained with IL-3R alpha/CD123 Antibody (IL3RA/2947R).

Protein Array: IL-3R alpha/CD123 Antibody (IL3RA/2947R) [NBP2-79717] - Analysis of Protein Array containing more than 19,000 fulllength human proteins using IL-3R alpha/CD123 Antibody (IL3RA/2947R). Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (Monoclonal Antibody) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProt(TM) array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProt (TM) are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a Monoclonal Antibody to its intended target. A Monoclonal Antibody is considered to specific to its intended target, if the Monoclonal Antibody has an S-score of at least 2.5
