## NBP3-08466G

dsDNA Antibody (rDSD/4565) [DyLight 488]

0.1 ml
Please see the vial label for concentration. If unlisted please contact technical services.
Store at 4C in the dark.
Monoclonal
rDSD/4565
0.05% Sodium Azide
IgG2a Kappa
DyLight 488
Protein A purified
50mM Sodium Borate
Mouse
Human
Nuclear Marker
This monoclonal antibody is part of a new panel of reagents, which recognizes subcellular organelles or compartments of human cells. These markers may be useful in identification of these organelles in cells, tissues, and biochemical preparations. This monoclonal antibody recognizes the double stranded DNA in human cells. It can be used to stain the nuclei in cell or tissue preparations and can be used as a nuclear marker in human cells. This monoclonal antibody produces a homogeneous staining pattern in the nucleus of normal and malignant cells. Double Stranded deoxyribonucleic acid (ds DNA) is the genetic material of all cells and many viruses and is a polymer of nucleotides. The monomer consists of phosphorylated 2-deoxyribose N-glycosidically linked to one of four bases, adenine, cytosine, guanine or thymine. These are linked together by 3-phosphodiester bridges. In the Watson-Crick double-helix model, two complementary strands are wound in a right-handed helix and held together by hydrogen bonds between complementary base pairs.
Nuclei of Burkitt's cells
DyLight (R) is a trademark of Thermo Fisher Scientific Inc. and its subsidiaries.
ELISA, Immunocytochemistry/ Immunofluorescence, Immunohistochemistry- Paraffin
