dsDNA Antibody (rDSD/4565) [Janelia Fluor® 585]

Product Information	
0.1 ml	
Please see the vial label for concentration. If unlisted please contact technical services.	
Store at 4C in the dark.	
Monoclonal	
rDSD/4565	
0.05% Sodium Azide	
IgG2a Kappa	
Janelia Fluor 585	
Protein A purified	
50mM Sodium Borate	
Mouse	
Human	
Nuclear Marker	
This monoclonal antibody is part of a new panel of reagents, which recognizes subcellular organelles or compartments of human cells. These markers may be useful in identification of these organelles in cells, tissues, and biochemical preparations. This monoclonal antibody recognizes the double stranded DNA in human cells. It can be used to stain the nuclei in cell or tissue preparations and can be used as a nuclear marker in human cells. This monoclonal antibody produces a homogeneous staining pattern in the nucleus of normal and malignant cells. Double Stranded deoxyribonucleic acid (ds DNA) is the genetic material of all cells and many viruses and is a polymer of nucleotides. The monomer consists of phosphorylated 2-deoxyribose N-glycosidically linked to one of four bases, adenine, cytosine, guanine or thymine. These are linked together by 3-phosphodiester bridges. In the Watson-Crick double-helix model, two complementary strands are wound in a right-handed helix and held together by hydrogen bonds between complementary base pairs.	
Nuclei of Burkitt's cells	
Sold under license from the Howard Hughes Medical Institute, Janelia Research Campus.	
ELISA, Immunocytochemistry/ Immunofluorescence, Immunohistochemistry- Paraffin	
ELISA, Immunocytochemistry/ Immunofluorescence, Immunohistochemistry- Paraffin	
Optimal dilution of this antibody should be experimentally determined.
