NBP3-08690H

H1F0 Antibody (rAE-4) [HRP]

	Product Information	
Unit Size 100 ul		
Concentration Please see the vial label for concentration. If unlisted please contact services.	technical	
Storage Store at 4C in the dark.		
Clonality Monoclonal		
Clone rAE-4		
Preservative No Preservative		
Isotype IgG2a Kappa		
Conjugate HRP		
Purity Protein A or G purified		
Buffer PBS		
Product Description		
Host Mouse		
Gene ID 3005		
Gene Symbol H1-0		
Species Human, Mouse, Rat		
Marker Pan Nuclear Marker		
Specificity/Sensitivity Please note that this antibody is a recombinant Mouse version of ori histone H1 antibody (Clone AE-4). Because the variable heavy (VH) light (VL) domains are the same, recombinant antibody has the sam reactivity as the original AE-4 monoclonal antibody. There are sever advantages of producing a recombinant version of a monoclonal ant example, a recombinant antibody is a purer preparation of active imm with no contaminating non-functional intact Ig or free light/heavy cha Secondly, antibody can always be produced, even if hybridoma line Moreover, it adds the flexibility of converting the antibody to any spe or format. Eukaryotic histones are basic and water-soluble nuclear p form hetero-octameric nucleosome particles by wrapping 146 base p in a left-handed super-helical turn sequentially to form chromosomal molecules of each of the four core histones (H2A, H2B, H3, and H4) octamer; formed of two H2A-H2B dimers and two H3-H4 dimers, forn nearly symmetrical halves by tertiary structure. Over 80% of nucleos contain the linker Histone H1, derived from an intronless gene that in	and variable e exact al ibody. For munoglobulin ins. is lost. cies, isotype roteins that bairs of DNA fiber.
