|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | Novus Biologicals Mouse PIDD Antibody (Lise-1) - BSA Free (NBP3-11673) is a monoclonal antibody validated for use in WB. All Novus Biologicals antibodies are covered by our 100% guarantee. |
| <b>Host</b>        | Mouse                                                                                                                                                                                        |
| <b>Gene ID</b>     | 55367                                                                                                                                                                                        |
| <b>Gene Symbol</b> | PIDD1                                                                                                                                                                                        |
| <b>Species</b>     | Mouse                                                                                                                                                                                        |
| <b>Immunogen</b>   | Mouse PIDD (Death Domain).                                                                                                                                                                   |

**Product Application Details**

|                              |                     |
|------------------------------|---------------------|
| <b>Applications</b>          | Western Blot        |
| <b>Recommended Dilutions</b> | Western Blot 1:1000 |

**Images**

Western Blot: MDA5 Antibody (Hely-1) [NBP3-11673] - Mouse PIDD is detected in primary MEF cells using MDA5 antibody (Hely-1).  
 Method: Cell extracts from mouse embryo fibroblasts (MEFs) either from WT (A-B) or PIDD KO cells (C-D) were separated by SDS-PAGE under reducing conditions, transferred to nitrocellulose and incubated with anti-PIDD (mouse), mAb (Lise-1) (1ug/ml). Proteins were visualized by a chemiluminescence detection system.
