

# ELISA PRODUCT INFORMATION & MANUAL

# Human Lipocalin-1 ELISA Kit (Colorimetric) NBP3-18729

Sample Insert for reference use only

Enzyme-linked Immunosorbent Assay for quantitative detection. For research use only.

Not for diagnostic or therapeutic procedures.

# **Assay Summary**

**Step 1**. Add 50  $\mu$ l of Standard or Sample per well. Incubate 2 hours.

**Step 2.** Wash, then add 50  $\mu$ l of Biotinylated Antibody per well. Incubate 1 hour.

**Step 3**. Wash, then add 50  $\mu$ l of SP Conjugate per well. Incubate 30 minutes.

**Step 4.** Wash, then add 50  $\mu$ l of Chromogen Substrate per well. Incubate 15 minutes.

**Step 5.** Add 50  $\mu$ l of Stop Solution per well. Read at 450 nm immediately.

# **Symbol Key**

Consult instructions for use.

# **Human Lipocalin-1 ELISA Kit (Colorimetric)**

Catalog No. NBP3-18729

Sample insert for reference use only

#### Introduction

Lipocalin-1 (LCN1) is alternatively known as tear lipocalin or von Ebner's gland protein. This 19.25 kDa protein consists of 176 amino acids and is a member of the lipocalin structural superfamily (1-2). The structure shared between the members of this family is eight antiparallel  $\beta$  sheets forming a  $\beta$  barrel that enclose an internal ligand binding site (3). LCN1 binds a multitude of lipophilic potentially harmful molecules, thereby protecting cells and tissues, and is thought to be part of the innate immune response in viral and fungal infections (1, 4). LCN1 has also exhibited other types of activity, including cysteine proteinase inhibition and nonspecific endonuclease activity in vitro (1). LCN1 has been looked at as a marker for noninvasive aneuploidy screening of embryos before implantation via in vitro fertilization (3) and Chronic Obstructive Pulmonary Disease (COPD) [4].

#### **Principle of the Assay**

The Human Lipocalin-1 ELISA Kit (Colorimetric) is designed for detection of LCN1 in human plasma, serum, urine, saliva, and cell culture samples. This assay employs a quantitative sandwich enzyme immunoassay technique that measures human LCN1 in approximately 4 hours. A polyclonal antibody specific for human LCN1 has been pre-coated onto a 96-well microplate with removable strips. LCN1 in standards and samples is sandwiched by the immobilized antibody and a biotinylated polyclonal antibody specific for human LCN1, which is recognized by a streptavidin-peroxidase (SP) conjugate. All unbound material is washed away and a peroxidase enzyme substrate is added. The color development is stopped and the intensity of the color is measured.

#### **Caution and Warning**

- This product is for Research Use Only and is not intended for use in diagnostic procedures.
- Prepare all reagents (diluent buffer, wash buffer, standard, biotinylated antibody, and SP conjugate) as instructed, prior to running the assay.
- Prepare all samples prior to running the assay. The dilution factors for the samples are suggested in this insert. However, the user should determine the optimal dilution factor.

- Spin down the SP conjugate vial, the biotinylated antibody vial, and the standard diluent vial before opening and using contents.
- The Stop Solution is an acidic solution.
- The kit should not be used beyond the expiration date.

#### Reagents

- **Human Lipocalin-1 Microplate:** A 96-well polystyrene microplate (12 strips of 8 wells) coated with a polyclonal antibody against human LCN1.
- **Sealing Tapes:** Each kit contains 3 precut, pressure sensitive sealing tapes that can be cut to fit the format of the individual assay.
- **Human Lipocalin-1 Standard:** Human LCN1 in a buffered protein base (80 ng, lyophilized).
- **Biotinylated Human Lipocalin-1 Antibody (50x):** A 50-fold concentrated biotinylated polyclonal antibody against human LCN1 (120 μl).
- MIX Diluent Concentrate (10x): A 10-fold concentrated buffered protein base (30 ml).
- Standard Diluent (1x): A buffered protein base with stabilizer (2 ml).
- Wash Buffer Concentrate (20x): A 20-fold concentrated buffered surfactant (30 ml, 2 bottles).
- SP Conjugate (100x): A 100-fold concentrate (80 μl).
- **Chromogen Substrate (1x):** A stabilized peroxidase chromogen substrate tetramethylbenzidine (7 ml).
- **Stop Solution (1x):** A 0.5 N hydrochloric acid solution to stop the chromogen substrate reaction (11 ml).

#### **Storage Condition**

- Upon arrival, immediately store components of the kit at recommended temperatures up to the expiration date.
- Store Standard, SP Conjugate, and Biotinylated Antibody at -20°C.
- Store Microplate, Diluent Concentrate (10x), Standard Diluent (1x), Wash Buffer, Stop Solution, and Chromogen Substrate at 2-8°C.
- Unused microplate wells may be returned to the foil pouch with the desiccant packs and resealed. May be stored for up to 30 days in a vacuum desiccator.

#### **Other Supplies Required**

- Microplate reader capable of measuring absorbance at 450 nm
- Pipettes (1-20 μl, 20-200 μl, 200-1000 μl, and multiple channel)
- Deionized or distilled reagent grade water

#### Sample Collection, Preparation, and Storage

- Plasma: Collect plasma using one-tenth volume of 0.1 M sodium citrate as an anticoagulant. Centrifuge samples at 3000 x g for 10 minutes and collect plasma. A 4-fold sample dilution is suggested into MIX Diluent; however, user should determine optimal dilution factor depending on application needs. The undiluted samples can be stored at -20°C or below for up to 3 months. Avoid repeated freeze-thaw cycles (EDTA or Heparin can also be used as an anticoagulant).
- **Serum:** Samples should be collected into a serum separator tube. After clot formation, centrifuge samples at 3000 x g for 10 minutes and remove serum. A 4-fold sample dilution is suggested into MIX Diluent; however, user should determine optimal dilution factor depending on application needs. The undiluted samples can be stored at -20°C or below for up to 3 months. Avoid repeated freeze-thaw cycles
- **Urine:** Collect urine using sample pot. Centrifuge samples at 800 x g for 10 minutes. An 8-fold sample dilution is suggested into MIX Diluent; however, user should determine optimal dilution factor depending on application needs. The undiluted samples can be stored at -20°C or below for up to 3 months. Avoid repeated freeze-thaw cycles.
- Saliva: Collect saliva using sample tube. Centrifuge samples at 800 x g for 10 minutes. A 4000-fold sample dilution is suggested into MIX Diluent; however, user should determine optimal dilution factor depending on application needs. The undiluted samples can be stored at -20°C or below for up to 3 months. Avoid repeated freeze-thaw cycles.
- **Cell Culture Supernatant:** Centrifuge cell culture media at 1500 rpm for 10 minutes at 4°C to remove debris and collect supernatant. If necessary, dilute samples into MIX Diluent; user should determine optimal dilution factor depending on application needs. The undiluted samples can be stored at -80°C. Avoid repeated freeze-thaw cycles.

Applicable samples may also include biofluids, cell culture, and tissue homogenates. If necessary, user should determine optimal dilution factor depending on application needs.

Refer to Dilution Guidelines for further instruction.

	Guidelines for Dilutions of 100-fold or Greater (for reference only; please follow the insert for specific dilution suggested)			
	100x		10000x	
A)	4 μl sample: 396 μl buffer (100x) = 100-fold dilution  Assuming the needed volume is less than or equal to 400 μl.	A) B)	4 μl sample : 396 μl buffer (100x) 4 μl of A : 396 μl buffer (100x) = 10000-fold dilution Assuming the needed volume is less than or equal to 400 μl.	
	1000x		100000x	
A) B)	4 μl sample : 396 μl buffer (100x) 24 μl of A : 216 μl buffer (10x) = 1000-fold dilution  Assuming the needed volume is less than or equal to 240 μl.	A) B) C)	4 μl sample : 396 μl buffer (100x) 4 μl of A : 396 μl buffer (100x) 24 μl of B : 216 μl buffer (10x) = 100000-fold dilution Assuming the needed volume is less than or equal to 240 μl.	

#### **Reagent Preparation**

- Freshly dilute all reagents and bring all reagents to room temperature before use.
- MIX Diluent Concentrate (10x): Dilute the MIX Diluent Concentrate 10fold with reagent grade water to produce a 1x solution. When diluting
  the concentrate, make sure to rinse the bottle thoroughly to extract any
  precipitates left in the bottle. Mix the 1x solution gently until the crystals
  have completely dissolved. Store for up to 30 days at 2-8°C.
- Human Lipocalin-1 Standard: Reconstitute the Human Lipocalin-1 Standard (80 ng) with 0.5 ml of Standard Diluent to generate a 160 ng/ml standard stock solution. Allow the vial to sit for 10 minutes with gentle agitation prior to making dilutions. Prepare duplicate or triplicate standard points by serially diluting from the standard stock solution (160 ng/ml) 2-fold with equal volume of MIX Diluent to produce 80, 40, 20, 10, 5, 2.5, and 1.25 ng/ml solutions. MIX Diluent serves as the zero standard (0 ng/ml). Aliquot remaining stock solution to limit repeated freeze-thaw cycles. This solution should be stored at -20°C and used within 30 days.

Standard Point	Dilution	[LCN1] (ng/ml)
P1	1 part Standard (160 ng/ml) + 1 part MIX Diluent	80
P2	1 part P1 + 1 part MIX Diluent	40
Р3	1 part P2 + 1 part MIX Diluent	20
P4	1 part P3 + 1 part MIX Diluent	10
P5	1 part P4 + 1 part MIX Diluent	5.0
P6	1 part P5 + 1 part MIX Diluent	2.5
P7	1 part P6 + 1 part MIX Diluent	1.25
P8	MIX Diluent	0.0

- Biotinylated Human Lipocalin-1 Antibody (50x): Spin down the antibody briefly and dilute the desired amount of the antibody 50-fold with MIX Diluent to produce a 1x solution. The undiluted antibody should be stored at -20°C.
- Wash Buffer Concentrate (20x): Dilute the Wash Buffer Concentrate 20fold with reagent grade water to produce a 1x solution. When diluting the concentrate, make sure to rinse the bottle thoroughly to extract any precipitates left in the bottle. Mix the 1x solution gently until the crystals have completely dissolved.
- SP Conjugate (100x): Spin down the SP Conjugate briefly and dilute the desired amount of the conjugate 100-fold with MIX Diluent to produce a 1x solution. The undiluted conjugate should be stored at -20°C.

#### **Assay Procedure**

- Prepare all reagents, standard solutions, and samples as instructed. Bring all reagents to room temperature before use. The assay is performed at room temperature (20-25°C).
- Remove excess microplate strips from the plate frame and return them immediately to the foil pouch with desiccants inside. Reseal the pouch securely to minimize exposure to water vapor and store in a vacuum desiccator.
- Add 50  $\mu$ l of Human Lipocalin-1 Standard or sample to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Cover wells with a sealing tape and incubate for 2 hours. Start the timer after the last addition.
- Wash the microplate manually or automatically using a microplate washer. Invert the plate and decant the contents; hit 4-5 times on absorbent material to completely remove the liquid. If washing manually, wash five times with 200 µl of Wash Buffer per well. Invert the plate each time and decant the contents; hit 4-5 times on absorbent material to completely remove the liquid. If using a microplate washer,

- wash six times with 300  $\mu$ l of Wash Buffer per well; invert the plate and hit 4-5 times on absorbent material to completely remove the liquid.
- Add 50 µl of Biotinylated Human Lipocalin-1 Antibody to each well.
   Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Cover wells with a sealing tape and incubate for 1 hour.
- Wash the microplate as described above.
- Add 50 µl of SP Conjugate to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Cover wells with a sealing tape and incubate for 30 minutes. Turn on the microplate reader and set up the program in advance.
- Wash the microplate as described above.
- Add 50 µl of Chromogen Substrate to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Incubate in ambient light for 15 minutes or until the optimal blue color density develops.
- Add 50  $\mu$ l of Stop Solution to each well. The color will change from blue to yellow. Gently tap plate to ensure thorough mixing. Break any bubbles that may have formed.
- Read the absorbance on a microplate reader at a wavelength of 450 nm immediately. If wavelength correction is available, subtract readings at 570 nm from those at 450 nm to correct optical imperfections. Otherwise, read the plate at 450 nm only. Please note that some unstable black particles may be generated at high concentration points after stopping the reaction for about 10 minutes, which will reduce the readings.

#### **Data Analysis**

- Calculate the mean value of the duplicate or triplicate readings for each standard and sample.
- To generate a standard curve, plot the graph using the standard concentrations on the x-axis and the corresponding mean 450 nm absorbance (OD) on the y-axis. The best fit line can be determined by regression analysis using log-log or four-parameter logistic curve fit.
- Determine the unknown sample concentration from the Standard Curve and multiply the value by the dilution factor.

#### **Typical Data**

The typical data is provided for reference only. Individual laboratory
means may vary from the values listed. Variations between laboratories
may be caused by technique differences.

Standard Point	ng/ml	OD	Average OD
P1	00	2.333	2.302
PI	80	2.271	2.302
P2	40	1.715	1.744
PZ	40	1.773	1.744
Р3	20	1.093	1.107
P3	20	1.121	1.107

го	0.0	0.078	0.079

#### **Standard Curve**

• The curve is provided for illustration only. A standard curve should be generated each time the assay is performed.

Human Lipocalin-1 Standard Curve

#### **Performance Characteristics**

- This assay recognizes both natural and recombinant human LCN1.
- The minimum detectable dose of human LCN1 as calculated by 2SD from the mean of a zero standard was established to be 0.65 ng/ml.

- Intra-assay precision was determined by testing three plasma samples twenty times in one assay.
- Inter-assay precision was determined by testing three plasma samples in twenty assays.

	Intra-Assay Precision			Inter-Assay Precision		
Sample	1	2	3	1	2	3
n	20	20	20	20	20	20
CV (%)	5.2%	4.6%	5.0%	10.2%	8.8%	9.5%
Average CV (%)	4.9%				9.5%	

#### Recovery

Standard Added Value	5 – 40 ng/ml
Recovery %	90 – 108%
Average Recovery %	97%

### Linearity

Plasma and serum samples were serially diluted to test for linearity.

Average Percentage of Expected Value (%)			
Sample Dilution	Plasma	Serum	
2x	106%	96%	
4x	99%	101%	
8x	97%	107%	

## **Cross-Reactivity**

Species	Cross-Reactivity (%)
Canine	None
Bovine	None
Monkey	30%
Mouse	None
Rat	10%
Swine	30%
Rabbit	None

- No significant cross-reactivity observed with LCN2, C8G, CRABP1, CRABP2, alpha-1-Microglobulin, ORM1, ORM2, RBP, RBP2, and RBP4.
- 10% FBS in culture media will not affect the assay.

# Troubleshooting
