## NB100-407 Protocol

Western Blot protocol for 14-3-3 gamma Antibody (NB100-407)

14-3-3 gamma Antibody (HS23): https://www.novusbio.com/products/14-3-3-gamma-antibody-hs23\_nb100-407

- 1. Load protein on gel (ie: ~30 ug of HeLa whole cell control lysate) and run.
- 2. Transfer protein to nitrocellulose (Schleicher&Schuell, cat# BA83).
- 3. Block the membrane with 5% milk for 30 minutes at room temperature.
- 4. Incubate the membrane with anti-14-3-3 gamma [cat# NB 100-407] (1:1,000), overnight at 4C or 2 h at room temperature. Milk or PBS-T are good for this dilution.
- 5. Wash the membrane 3 times, 10 minutes per wash in PBS with 0.1% Tween-20 (PBS-T).
- 6. Incubate with secondary antibody for 30 minutes at room temperature. Use milk in PBS-T as a diluent.
- 7. Rinse the membrane 2 times with deionized water and place in an ECL working solution.
- 8. Expose to the film.
